1 Omid Reza Keyshams

Petroleum Engineering Graduate | Drilling & Well Operations Track

Site: https://ok2003.github.io/omid-portfolio | LinkedIn: omidreza-keyshams

2 Professional Summary

Petroleum Engineering graduate from the Petroleum University of Technology with a focused track in drilling and well operations. Combines hands-on rig-floor exposure from a field internship in Iran's southern oil-rich regions with practical software development skills — including building desktop and web applications with Python and Next.js. Fluent in English (C1), with strong analytical, documentation, and digital tooling capabilities for modern drilling and well operations environments.

3 Education

B.Sc. in Petroleum Engineering — Drilling & Well Operations Track

Petroleum University of Technology

Core focus: drilling engineering, well operations, and petroleum production fundamentals

petroleum software development (Python, PySide6, pyqtgraph); web development (Next.js); software & system architecture.

4 Internship Experience

Intern — Drilling Operations (Land Rig) — Southern Oil-Rich Regions of Iran · 1 month

Completed a one-month field internship with the company's land rig operations in the southern oil-rich regions of Iran. Gained direct exposure to on-site drilling and well operations, including:

- Observing day-to-day drilling operations at the rig site and the workflow of rig crews across shifts.
- Familiarity with drilling equipment, well control awareness, and safety procedures on location.
- Understanding of daily drilling reports, operational parameters, and coordination between office and field teams.

5 Projects

EDI — Drilling Desktop Software · Python, PySide6

Developed a desktop application supporting drilling engineering workflows, featuring a structured graphical interface built with Python and the PySide6 (Qt) framework. The project strengthened skills in translating drilling and well operations requirements into functional software, including data handling, interface design, and modular application architecture.

6 Technical Skills

- **Programming & Development:** Advanced Python, Next.js, software architecture
- **Desktop Applications:** PySide6 (Qt) for building engineering GUI applications
- **Office & Productivity:** ICDL-certified Microsoft Office suite and digital skills; advanced Excel
- **Engineering:** Drilling operations , well operations workflow

7 Languages & Certifications

- **English:** Advanced — C1 level, with professional reading, writing, and technical communication skills suitable for international oil and gas environments.
- **Certifications:** International Computer Driving Licence (ICDL), covering core computing, office software, and digital productivity skills.
